DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 3-6, 8-11, 13-16, and 18-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:

None of the prior art teaches or suggests signal detection system as the current application. In more specific, US Paten 6,826,350 by Kashino et al. is a very close prior art. Kashino et al. disclose a feature quantity sequence as a reference, determine an input feature quantity signal, and calculate the signal degree of similarity between the reference and input feature quantity sequence. However, Kashino et al. fails to teach a distortion or noise addition device in signal searching system. The current application overcome the prior art by a distortion adding step to the at least one of the reference time-series signal, the input time-series signal, the reference feature time-series signal, the input feature time-series signal, the reference coded time-series signal, and the input coded time-series signal. Moreover, in the distortion addition step: the added distortion is generated using random numbers; an amount of distortion used for distorting features is modeled using a normal distribution, wherein parameters in the modeling are the amount of parallel translation and the variances; and the distortion is added using at least one of the amount of parallel translation and the variance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
